Aim: To write a program to convert the string character according to the given input

Source Code:

```
// string conversion Programme
#include<iostream.h>
#include<conio.h>
#include<ctype.h>
void main()
{       clrscr();
        char str[20];
        char ch;
        cout<<"Enter The String :";
        cin>>str;
        cout<<"\nEnter The character to be reverted :";
        cin>>ch;
        cout<<"\n===================================================\n";
        cout<<"Original String :"<<str;
        for(int i=0;str[i]!='\o';++i)
        {
                if(tolower(str[i])==tolower(ch))
                {       if(islower(str[i]))
                        str[i]=str[i]-32;

                        else
                        str[i]=str[i]+32;
                }
        }
        cout<<"\nNew String :"<<str;
        getch();
}
```

Output :
